

The Water Cycle

- 10 More than three quarters of the Earth's surface is water.
- 20 Heat from the Sun causes water to evaporate from seas,
- 28 lakes, rivers and streams. Water also evaporates from
- 39 puddles and ponds. It doesn't even need to be hot for
- 50 this to happen! When the water has evaporated, it is in
- 61 the form of water vapour, which rises in the air, clumps
- 70 together and cools down (condenses) to form clouds. As
- 78 more water vapour condenses, more water droplets are
- 87 formed in the clouds. Eventually, the water droplets are
- 99 large and heavy enough to fall back to the surface of the
- 107 Earth as precipitation (rain, sleet, hail or snow).

Quick Questions

1. Find and copy two words that mean the same as 'ground'

2. In which four ways can precipitation fall?

3. Summarise the main points of this text in 20 words or less.

4. List all of the places where water is found on Earth.
